I. Executive summary

This project profile is prepared to assess the viability of running Tomato processing factory, in Addis

Abeba city administration. Hence Market, Technical, Organizational and Financial study was made

to investigate the viability of the envisaged project.

This project profile on Tomato processing factory has been developed to support the decision –

making process based on a cost benefit analysis of the actual project viability. This profile includes

marketing study, production and financial analysis, which are utilized to assist the decision-makers

when determining if the business concept is viable. Ethiopia has a private sector driven tomato

processing industry. According to the latest data sourced from the ministry of Trade and industry

here are more than 17 registered Fruits and vegetables processing factories in Ethiopia.

The location of the plant will be decided on the basis of access to raw materials, infrastructure

namely power, water, transport and telecom to easy access to international market. The most locally

available raw materials for the factory are Tomato.

The factory at full capacity operation can process 104,000 quintals to produce 42,168 quintals of

Tomato paste, per year based on 260 working days and their shifts of 24 hours per day.

The total investment capital including establishing the factory is Birr 345.60 million. Out of the total

investment capital, the owners will cover Birr 103.68million (30 %) while the remaining balances

amounting to Birr 241.90 million (70 %) will be secured from bank in the form of term loan.

CONSULTANT:- SHIBAG MANAGEMENT AND DEVELOPMENT & EIA CONSULTING FIRM

As indicated in the financial study, the cash flow projection of the project shows surplus from the

first year on. The net cash flows of the project range from Birr 76.94 Million in the first year to Birr

106.96 million at the end of the 10<sup>th</sup> year of operation. At the end of the 10<sup>th</sup> year of operation period

the cumulative cash balance reaches Birr 1.080 billion. The Benefit-cost ratio and Net present value

(NPV) have been calculated at 17% discount factor (D.F) for 10 years of the project activity.

Accordingly, the project has NPV of 628.96 million Birr at 17%D.F. and the benefit-cost ratio of

1.52 at 17% D.F.

Therefore, from the aforementioned overall market technical and financial analysis we can conclude

that the tomatoes processing factory business is a viable and worthwhile.

1. Background information

1.1. Introduction

This document was undertaken to show Agro-processing sector investment profile in Addis Ababa.

In compiling the report, information from Addis Ababa investment commission, Addis Ababa trade

and industry development, Ethiopian custom and revenue commission, Ethiopian investment

commission (EIC), Central statistics agency (CSA) and, other published sources have been

augmented.

The contribution of the agro-processing sector to the national economy is minimal compared to its

potential. One of the main causes of this mismatch between population size and production output

from agro-processing in Ethiopia is the backwardness of our farming system (rain-feed) and weak

market linkage between the raw fruit and vegetables producers' and the processors'.

The establishment of agro-processing sectors like Tomato processing factory is of fundamental

importance to Ethiopian's present and future food security. In Ethiopia, the demand for processed

vegetables products is expected to increase considerably in the next few decades as a result of

increased population growth, urbanization and increasing income levels, and unless the supply of

vegetables and fruit production can be improved through good farming system and value addition

process, it is predicted to encounter severe food shortage throughout the country.

CONSULTANT:- SHIBAG MANAGEMENT AND DEVELOPMENT & EIA CONSULTING FIRM

1.2. Product description

Tomato paste, sauce and ketchup are flavored products processed from sorted, washed and fresh

wholesome tomatoes and hot fruits. Tomatoes are one of the most widely grown vegetable crops

which are used in processing of different food products. Tomatoes are valuable sources of vitamins

and minerals. Studies have shown that people who consume large amount of tomato products may

be at or lower risk of especially cancer of prostate gland, lung and stomach. Primary products derived

from fresh tomatoes are tomato juice, tomato paste, and Tomato ketchup and tomato sauce.

Concentrated tomato juice, without seeds and skins and containing not less than 25 percent of solids

is known as tomatoes paste. If the juice (pulp) is further concentrated so as to contain 33% or more

of tomatoes solids, it is called concentrated tomato paste. Tomato ketchup is mainly used as an

appetizer during consumption of other food staffs whereas sauce is used for food coloring, seasoning,

soup preparation and also for reducing the amount of ground hot pepper in "Wot" (traditional hot

sauce) without affecting the attractive red color of same. Tomato sauce and ketchup are consumed

mainly by households, restaurants, hotels and by public institutions like hospitals, training centers,

boarding schools, orphanages, etc.

1.3. Project location and justification

1.3.1. Location of Addis Ababa

Addis Ababa is the seat of the Ethiopian federal government. It is located on the central highlands

of Ethiopia in the middle of Oromia Region. The absolute location is around the intersection point

of 901'48". N latitude and 38°44'24" E longitudes. This is very near to the geographical center of the

country. It is, therefore, equidistant to the peripheral areas or is equally accessible to almost all parts

of Ethiopia. Addis Ababa is located on a well-watered plateau surrounded by hills and mountains.

The city is in the highlands on the edge of the Ethiopian rift valley or the eastern slopes of the Entoto

CONSULTANT:- SHIBAG MANAGEMENT AND DEVELOPMENT & EIA CONSULTING FIRM

Mountain ranges bordering the Great Rift Valley. The total area of Addis Ababa is about 540 km<sup>2</sup>

of which 18.2 km<sup>2</sup> are rural. Addis Ababa's built-up urban area spans 474 km<sup>2</sup>. It is also the largest

city in the world located in a landlocked country.

1.3.2. Demography of Addis Ababa

According to the worldometer report, Ethiopia's total population reaches about 120 million people

in 2022. Of the total population 21% (25.2 million people) live in urban areas. Ethiopia's urban

population is expected to triple by 2037 (World Bank, 2015). Addis Ababa hosts an estimated

5,228,000 people. Currently, Addis Ababa is experiencing an annual growth rate of 4.42%.

1.3.3. Economic activity of Addis Ababa

The transformation of Addis Ababa has especially been rapid since 1991. According to the data from

the city's Bureau of Finance and Economic Development (2006), per capital income of Addis Ababa

has grown from USD 788.48 in 2010 to USD 1,359 in 2015. The city also achieved a decline in the

poverty index from a high of 29.6 in 2012 to 22.0 in 2014. Moreover, the current poverty headcount

index for Addis Ababa is estimated at 18.9 while the poverty severity account for 5 and 1.8 index

points respectively. Even though, the poverty status of Addis Ababa has an improvement over

previous years, there is still much work to be done to curb both the incidence and severity of poverty.

The major contributor to the economic growth of the city is the implementation of publicly financed

mega urban projects like condominium housing, the Light Rail Transit, the international airport and

industrial zone development (The state of Addis Ababa, 2017). The existence of international large

and medium-size enterprises in and around Addis Ababa have also significant role in creating huge

opportunity for employment and technology transfer. Furthermore, there are strong demand for

CONSULTANT: - SHIBAG MANAGEMENT AND **DEVELOPMENT & EIA CONSULTING FIRM** 

goods and services following the existence of many embassies and inter-governmental organizations

like the African Union, the United Nations Economic Commission for Africa.

The manufacturing sector's contribution to Addis Ababa's GDP is high. Despite the fact that 86%

of the industries in the city are micro and small scale (cottage and handicrafts, and small-scale), the

majority of the country's large and medium scale industries are found in the city. Noticeable

increases are also registered currently in other aspects of industrial growth.

The service sector is both the largest contributor to the city's economy and the largest employer. It

contributes to 76.4% of the city's GDP while industry's share makes up (almost all) the rest. This

sector is dominated by three major sub-sectors: Transport and communication; Real estate, Renting

and Business services; and Trade, Hotel and Restaurants. According to the state of Ethiopian Cities

2015 report, the service sector has also been responsible for more than 50% of the growth in the

estimated annual growth of the city's GDP. Although 75% of employment in the city is also

generated in the service sector, a large proportion of the employed work in low skill and low paying

jobs as shop salespersons, petty and 'gullit' traders, sales workers in small shops, domestic helpers

or doorkeepers and restaurant service workers.

Analysis of the economic structure of Addis Ababa reveals that the services sectors (63%) dominates

with industry (36%) in second place indicating that these sectors account for almost all of the Addis

Ababa's GDP (The State of Addis Ababa, 2017).

Addis Ababa has a great share in the economy of the country due to its attractiveness to businesses,

companies, individuals and foreign direct investment. Overall primacy index of the city is 24.8 based

on urban employment and unemployment survey (CSA 2015). According to the State of Addis

Ababa 2017 report, the simultaneous high rates of economic growth and urbanization in Addis

CONSULTANT:- SHIBAG MANAGEMENT AND DEVELOPMENT & EIA CONSULTING FIRM

Ababa indicates a likely further rising dominance of the city in Ethiopia's economy as well as

growing agglomeration of economic activities in and around the city.

1.4. The Current Status of Fruit and Vegetable Processing in Ethiopia

Ethiopia's wide range of agro-climatic conditions and soil types make it suitable for the production

of diverse varieties of fruits and vegetables, including temperate, tropical and sub-tropical crops.

Most of the soil types in fruits and vegetables producing regions of the country range from light clay

to loam and are well suited for horticultural production.

According to information obtained from the central statistical agency (CSA), the total area under

fruits, vegetables and root crops is about 603,207 he in 2019/20. Out of which 41 % is under root

crops while vegetables and fruits occupy 40 % and 19 %, respectively. Some of the constraints of

horticultural production are related to the perishable nature of their product. This is a major problem

especially when marketing horticultural produce. During peak harvest seasons, fruit and vegetables

are sold at throw away price because of lack of means to preserve and store the products. Therefore,

in order to prolong the shelf life of the post harvested produce, processing is necessary. Processing

contributes towards expansion of market of the processed products in availing it during off-seasons

and also increasing its value. Producers of fruit and vegetables will increase production if there is a

market for their products.

In Ethiopia, fruits and vegetables processing sector is underutilized. Currently, there are only 17

fruits and vegetables processing plants in the country. These plants presently process limited

products: tomato paste, orange marmalade, guava nectar, vegetable soup, canned vegetables and

wine.

CONSULTANT:- SHIBAG MANAGEMENT AND DEVELOPMENT & EIA CONSULTING FIRM

1.5. Why is it beneficial to invest in Addis Ababa?

Addis Ababa is the largest and most economically significant city in the country. Ethiopia's urban

population share is only 17 percent (as of 2012, World Bank 2015). The city is the only urban area

in Ethiopia capable of delivering scale economies in terms of concentrated demand, specialization,

diversity and depth of skills, innovation, and technology transfers. Thus, investors will be benefited

in getting capable human power from the market.

The capital is the country's main industrial hub. The city dominates industrial capacity in almost all

the braches of light manufacturing that Ethiopia prioritizes. As a result Addis Ababa completely

dominates production in various subsectors. This can be taken as the political and social stability of

the city.

Overall, the city has a beautiful environment, favorable location, and strong industrial base. Its

advantage as an economic powerhouse of the country and human resource center are the most

attractive features for local and overseas investors.

Moreover, investors will be getting a comprehensive set of incentives for priority sectors. These

include:

Customs duty free privilege on capital goods and construction materials, and on spare parts

whose value is not greater than 15% of the imported capital goods' total value.

• Investors have the right to redeem a refund of customs duty paid on inputs (raw materials

and components) when buying capital goods or construction materials from local

manufacturing industries.

CONSULTANT:- SHIBAG MANAGEMENT AND DEVELOPMENT & EIA CONSULTING FIRM

Income tax exemption of up to 6 years for manufacturing and agro-processing, and up to 9

years for agricultural investment.

Additional 2-4 years income tax exemption for exporting investors located within industrial

parks and 10-15 years exemption for industrial park developers.

Loss Cary forward for half of the tax holiday period. Several export incentives, including

Duty Draw-Back, Voucher, Bonded Factory, and Manufacturing Warehouse, and Export

Credit Guarantee schemes.

1.5.1. The city benefit from the investment

The city will be benefited from investment. These are discussed below.

Employment opportunity

Investment is expected to provide direct and indirect employment. These range from

unskilled causal workers, semi-skilled and skilled employees.

Improving growth of the economy

Through the use of locally available materials and exporting products, the investment

contributes towards growth of the economy by contributing to the growth of domestic

product. These eventually attract taxes including VAT which will be payable to the

government hence increasing government revenue while the cost of local materials will be

payable directly to the producers. In addition, domestic products save foreign exchange and

exports also bring money to the country.

CONSULTANT:- SHIBAG MANAGEMENT AND DEVELOPMENT & EIA CONSULTING FIRM

# 2. Marketing study

#### 2.1. Market analysis summary

The current drive and emphasis by the government on the diversification of the industrial base away from the other sector presents an opportunity for production industry to a valuable contribution towards achieving goal. Having undertaken a thorough and comprehensive research of the market we realized that there was a vast opportunity for domestic products. Aware of the fact operating in such a market is largely dependent on good networking, the promoter intends to establish networks and strategic relationships with various wholesalers and retailers to ensure a steady stream of orders. In so doing the owner intend to ensure that the products they produce are of extremely high quality and fully serve the customers purpose.

#### 2.2. The Supply of Tomato Paste

#### 2.2.1. Local processed Tomatoes supply

In Ethiopia there are large scales, medium and small scale tomatoes processing plant. The design capacity of the large and medium scale plants is estimated to be about 73,792 quintals per year of different types of processed tomatoes and assume local supply will increase by 2.5%. The design capacity of these plants is shown below.

Table 1 Tomato processing factories and their capacities in Ethiopia as today

| S/No | Factory                                     | Major products (in quintal)  | Production Capacity<br>in quintals/year<br>(Fresh tomatoes) | Final products in quintals |

Source: EIC and CSA

#### **2.2.2.** Import

The supplies of Tomato paste, Tomatoes ketchup and tomato Sauce have been met both through import and domestic production. Although there is no apparent trend in the growth of import Tomato paste, Tomatoes ketchup and tomato Sauce have continuously been appearing in the import statistics.

2.2.2.1. Imported processed Tomato paste

Sources: Ethiopian Revenue and customs Authority, compiled by consultant

As it has been shown in table 2 import of tomato concentrate (tomato paste) which was 775,419 kg at the beginning of the period (2012) has grown to 1,737,925 kg by the end, 2021. A closer observation at the data set reveals that imported tomato concentrate (tomato paste) over the study period has shown varying patterns that is, fluctuation from 2012 to 2021 it has been shown increasing, in 2016. During the recent four years i.e. 2016 to 2021 the annual average import has reached to a level of about 1,152,189 kg.

#### 2.3. Processed Tomatoes Paste Demand Projection

The demand for Processed Tomatoes can be influenced by a number of factors. The size of population and its growth rate, disposable income and prices are few among many variables. However, data on some of these parameters are not readily available in Ethiopia. Nevertheless, for the purpose of this study, attempts have been made to forecast the likely future demand for Processed Tomatoes on the basis of the following assumptions:

- i. Ethiopia population is estimated to be 120,202,679 As of today (2022)
- ii. Urban population 21% of the total population
- iii. Annual growth of population is taken to be 2.5%
- iv. Per capital consumption

- v. Changed recipes for cooking by the housewives.
- vi. Expansion of fast food industry in the country
- vii. Increasing portion of office working women
- viii. The existing processors foresee no change in supply
- ix. Per capital consumption  $=\frac{\text{Effective demand}}{\text{Urban population}}$
- x. Effective demand = per capital consumption of domestic processed tomato + Average per capital consumption of imported processed tomato = 0.0292kg+ 0.051kg = 0.343kg/person/year

Table 5 Projected Demand for processed tomatoes in Ethiopia

| Year | Ethiopian<br>Population | Urban population 21% | Per capital consumption is estimated to be 0.343 and increased by 2.5% every year | Total estimated demand |  |
|------|-------------------------|----------------------|---|------------------------|--|
| 2022 | 120,202,679             | 25,242,563           | 0.343   | 8,658,199              |  |
| 2023 | 123,207,746             | 25,873,627           | 0.352   | 9,096,520              |  |
| 2024 | 126,287,940             | 26,520,467           | 0.360   | 9,557,032              |  |
| 2025 | 129,445,138             | 27,183,479           | 0.369   | 10,040,856             |  |
| 2026 | 132,681,267             | 27,863,066           | 0.379   | 10,549,175             |  |
| 2027 | 135,998,298             | 28,559,643           | 0.388   | 11,083,227             |  |
| 2028 | 139,398,256             | 29,273,634           | 0.398   | 11,644,315             |  |
| 2029 | 142,883,212             | 30,005,475           | 0.408   | 12,233,808             |  |
| 2030 | 146,455,292             | 30,755,611           | 0.418   | 12,853,145             |  |
| 2031 | 150,116,675             | 31,524,502           | 0.428   | 13,503,836             |  |
| 2032 | 153,869,592             | 32,312,614           | 0.439   | 14,187,467             |  |

As it is indicated above the demand for processed tomatoes at 2022 is 8,658,199 kg. This volume will increase to 14,187,467 kg in the year 2032.

#### 2.4. Demand-Supply gap

When we see the historical supply volume of processed tomatoes in Ethiopia there is no apparent trend in the growth. Because both the import and production data are found to be erratic. Consequently, in projecting the likely future supply we have assumed to consider the supply figure of processed tomatoes paste in 2021 to be 7,379,200kg local productions as a base figure.

Ii is further assumed that domestic production will increase by 2.5% growth rate, equivalent to population growth of our country, for new as well as expansion projects for current manufacturers.

Table 6 Projected Demand Supply Gap analysis of tomatoes paste

| Year | Projected demand<br>(In kg) | Projected local supply (In kg) | Projected import in kg | unsatisfied demand (GAP) in kg, by assuming that import totally substituted by domestic production |
|------|-----------------------------|--------------------------------|------------------------|--|
| 2022 | 8,658,199                   | 7,379,200                      | 1,737,925              | 1,278,999  |
| 2023 | 9,096,520                   | 7,563,680                      | 1,836,176              | 1,532,840  |
| 2024 | 9,557,032                   | 7,752,772                      | 1,934,426              | 1,804,260  |
| 2025 | 10,040,856                  | 7,946,591                      | 2,032,677              | 2,094,265  |
| 2026 | 10,549,175                  | 8,145,256                      | 2,130,927              | 2,403,919  |
| 2027 | 11,083,227                  | 8,348,887                      | 2,229,178              | 2,734,340  |
| 2028 | 11,644,315                  | 8,557,610                      | 2,327,429              | 3,086,705  |
| 2029 | 12,233,808                  | 8,771,550                      | 2,425,679              | 3,462,258  |
| 2030 | 12,853,145                  | 8,990,839                      | 2,523,930              | 3,862,306  |
| 2031 | 13,503,836                  | 9,215,610                      | 2,622,180              | 4,288,226  |
| 2032 | 14,187,467                  | 9,446,000                      | 2,720,431              | 4,741,467  |

As shown in the above table, the project will have unsatisfied demand for the coming 10 years' period. The projected demand will continue to be positive until 2032. It can be clearly noted that

there is a huge gap between supply and demand figures, which can really be taken as the apparent demand-supply gap for tomatoes paste in Ethiopia. This is really the actual unsatisfied demand as imports have to be substituted that also helps in saving the foreign currency outflow from the country. The unsatisfied demand for processed tomatoes for the year 2032 estimated at 4,741,467 kg.

# 3. Technology and engineering

#### 3.1. Technology

#### 3.1.1. Tomato production process flow

After harvesting, tomatoes are transported to the processing plant as soon as possible. Once at the plant, they should be processed immediately, or at least stored in the shade. Fruit quality deteriorates rapidly while waiting to be processed. To unload, either tomatoes are off-loaded onto an inclined belt, or the gondolas are filled with water from overhead nozzles. If water is used, gates along the sides or undersides of the gondolas are opened, allowing the tomatoes to flow out into water flumes. Mere rinsing of tomatoes in water is not enough, because of mold filaments and other microorganisms found in their cracks, wrinkles, folds and stem cavities are not easily dislodged. For thorough cleaning they should be washed in running water. For large scale, rotary washers are used. The production process involves the following main processes.

- 1. Receiving
- 2. Washing of the fresh tomatoes and fruits
- 3. Sorting
- 4. Chopping/Crushing
- 5. Preheating

- 6. Pulping and Refining
- 7. Evaporation /concentration
- 8. Packaging

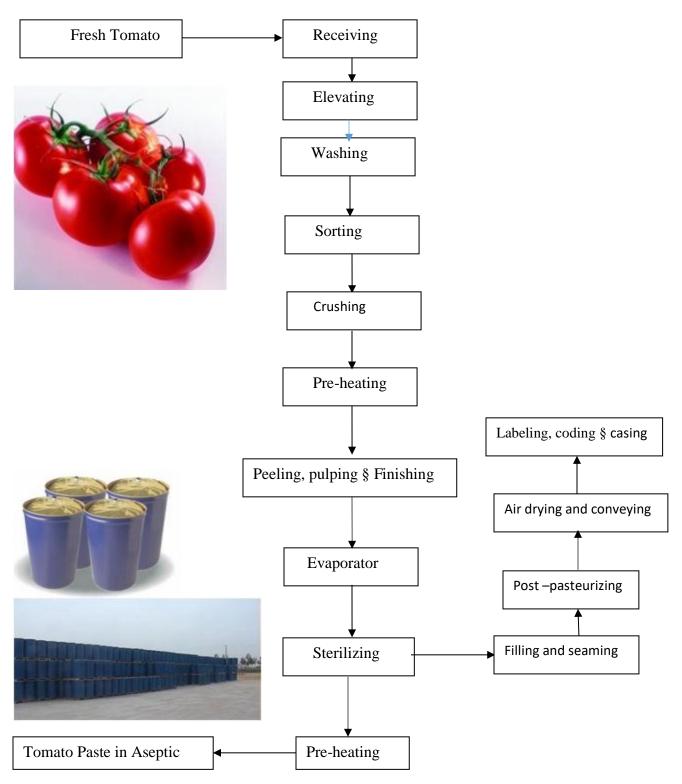

Figure 1 tomato process flow diagram

#### 3.1.2. Environmental and social impact assessment of the project

Typically, any developmental projects also trigger a set of environmental and social impacts. These environmental and social due to development projects occur in different forms. An Environmental and Social Impact Assessment (ESIA) has to be carried out to study the potential environmental and social impacts due to the production tomato paste. Potential environmental and social impacts due to the production of tomato based products on attributes like air quality, noise, water quality, soil, flora, socio-economic, etc. have to be assessed as part of the ESIA study. Appropriate mitigation measures to help minimize/avoid impacts from the development have to be recommended in the study. The measures include avoidance measures, mitigation measures and environmental enhancement measures. For the purpose of including environmental costs, the costs of wastewater treatment plant and solid waste incineration systems are included in the cost of machinery and equipment. Social responsibility cost estimated to be 1% of fixed investment costs.

#### 3.1.3. Production program of tomato derivatives

The annual production program at full capacity will produce 42,168 quintals per year. The plant initially produces 70 % of its annual rated capacity bound to initial operating problems such as machine set up and marketing. The production program does not include Sundays and national and public holidays. It was also considered that the plant would conduct annual maintenance for 12 days when the supply of raw materials is low.

Table 7 production plan for tomato processing plant

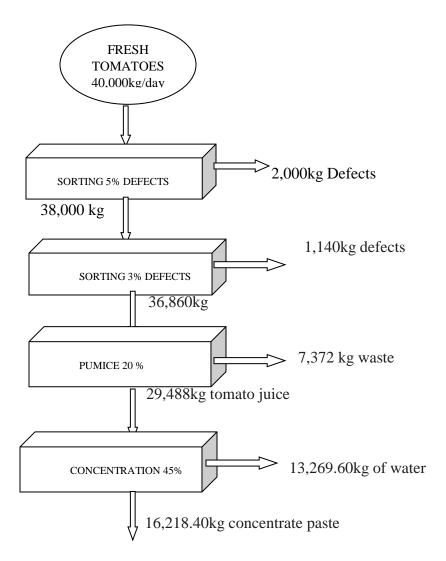

|   | Period       | Percentage | Unit of  | Start-up |        |        | Full Capacity |        |
|---|--------------|------------|----------|----------|--------|--------|---------------|--------|
|   |              | of         | measure  |          |        |        |               |        |
|   | Capacity     | products   |          | 70%      | 80%    | 90%    | 100%          | 100%   |

|   | Project year |            |          | 1        | 2      | 3      | 4             | 5      |
|   | Product type |            |          |          |        |        |               |        |
| 1 | Tomato paste | 100%       | Quintals | 29,518   | 33,734 | 37,952 | 42,168        | 42,168 |

#### 3.1.4. Plant capacity

The annual production capacity of the plant in full capacity is 42,168 quintals per year. The production capacity is based on projected demand and realistic market share that could be captured. The production commences two shift and 260 working days a year. The production capacity will increase by 10 % and attain its full capacity by the four year of its commencement.

# 3.1.5. Material balance for tomato processing line

Material balance of tomato processing factory

Engineering 3.2.

3.2.1. Land, buildings and civil works

The required area (m<sup>2</sup>) and construction cost for the production facilities essential for the successful

operation of the processing plant is shown in Table 8. A total area ready for the processing plant is

10,000 m<sup>2</sup> out of which 6,020 m<sup>2</sup> is to be covered by building while uncovered area of 3,980m<sup>2</sup> is

left for storage of waste materials and future expansions. In order to estimate the land lease cost of

the project profiles it is assumed that all the project will be located in different land level from level

1/1 to level 4/3, their current market lease price is from 39,073.31 birr per M <sup>2</sup> to 2,800.71 birr per

M <sup>2</sup>respectively. Therefore, for the profile a land lease rate of birr 3,885 per M <sup>2</sup> have been taken,

which is between the ranges.

The cost of construction of building should be appropriate to the size and expected profitability of

business, costs of building generally differs by the type of construction materials used, the type of

foundation, wall height and location. The current building cost for simple storage and processing

room is from 10,000.00 Birr per m<sup>2</sup> to 25,000.00 Birr per m<sup>2</sup>. The total construction cost of buildings

and civil works, at a rate of Birr 20,000 per m is estimated at Birr 115.30 million. Therefore, the

total cost of land lease and construction of buildings and civil works is estimated at Birr 116.53

million.

The proposed plant layout comprises the following buildings and structures.

# 4. Organizational structure

The selection of structure of the envisaged project is made based on the existing structure of manufacturing plants operating in the country, the capacity, complexity and technology mix of the plant. Organizational structure principles such as specialization, coordination, and departmentalization are also considered for design of structure that best suits the envisaged project

# 4.1. Manpower Requirement and Estimated Annual manpower costs

| Description                        | Number | Monthly salary | Annual salary, Birr |
|------------------------------------|--------|----------------|---------------------|
| plant manager                      | 1      | 30,000.00      | 360,000.00          |
| Administration and finance manager | 1      | 15,000.00      | 180,000.00          |
| Human resource manager             | 1      | 7,500.00       | 90,000.00           |

5. Financial Analysis

5.1. General

The financial analysis evaluation of tomato project, are mainly consisted of capital investment as

well as operating and maintenance costs. The capital investment costs include fixed investment costs

(initial fixed investment and replacement costs) and working capital, while operating and

maintenance costs comprise current expenses related to material inputs, manpower cost, utility,

repair and maintenance costs, and spare parts, Overheads, Sales and distribution, interest and

depreciation expenses.

The financial analysis and evaluation has been conducted taking assumptions:

1. It is assumed that about 70% of the total capital investment costs including the working

capital requirement could be covered through development bank loans of short and long-

term credits. The remaining balance 30% will be covered by equity capital contribution of

the project owner.

2. Even though the project might secure loans under different term and conditions as well as

from different financial sources, for the purpose of calculation of debt service scheduling,

the current development bank of Ethiopia credit terms and conditions have been used.

Consequently. It is assumed that the project will secure loan facility on the basis of 11.5 %

annual interest rate.

3. Even though the estimated project production life is more 10 years, the financial analysis has

been undertaken for a period interval covering the first 10 years only, during which time

CONSULTANT:- SHIBAG MANAGEMENT AND DEVELOPMENT & EIA CONSULTING FIRM

most of the capital assets are assumed to be deprecated, debts recovered and pay-back period accomplished.

- 4. It is assumed that the project will be start up production activity at 70 % capacity. During years 2 & year 3 the projects is anticipated to gradually increase capacity utilization to reach 100% in year 4. Therefore, starting from year 4 the project will be operational at full capacity.
- 5. For the project under reference promotional, sales and distribution expenses have been estimated at 3% of the sales revenue.
- 6. Maintenance and spare parts costs are 1.5% of the fixed investment costs.
- 7. Furniture and fixture costs assumed to be 500,000.00
  - 5.2. Initial Fixed investment costs

Table 12 Initial Fixed investment costs

| S/No | Fixed investment type          | Unit of      | Quantity | Unit price                   | Total Amount   | Remarks  |
|------|--------------------------------|--------------|----------|------------------------------|----------------|--|

|      | Fixed capital investment costs |              |          |                              | 316,650,000.00 |  |
| 8    | pre-operational expenses       |              |          |                              | 2,000,000.00   |  |
|      | Working capital                |              |          |                              | 26,947,000.00  |  |
|      | TOTAL INVESTME                 |              |          | 345,597,000.00               |                |  |

5.3. Working capital

Working capital is the financial means required for smooth operation and maintenance of a project

mathematically, it is a difference between current assets and current liabilities. In the particular case

of the project under consideration, the current assets comprise receivables, inventories (local and

imported material inputs, spare parts, work in progress, and products ready for delivery) and cash in

hand, while current liabilities comprise accounts payable to creditors. See Annex table 18 detail

annual working capital calculation.

5.4. Project Financing

Fixed capital investment costs and working capital requirements are assumed to be financed by

equity capital of the owner and through loans of short and long-term credits.

The company obtains loans under different terms and condition as well as from different sources,

for the purpose of calculation of debt service scheduling the current development bank of Ethiopia

credit terms and conditions have been used. Accordingly, it is assumed that the company will be

able to obtain loan 70% of the total investment costs for construction of different buildings for

purchase of machineries. The remaining balance that of the total investment costs will be expected

to be covered by equity contribution of the project promoter.

CONSULTANT:- SHIBAG MANAGEMENT AND DEVELOPMENT & EIA CONSULTING FIRM

5.5. Production costs

As it is depicted in Annex Table 17 major categories of the total production costs are assembled into

the following cost elements.

5.5.1. Material inputs

In the project under study the basic material inputs (see in table 16) are Tomato, packing materials etc.

Therefore, the current prevailing local and international market prices have been used for estimation of

material inputs costs. At full capacity operation the material inputs costs are estimated at Birr 180.80 million

per annum.

5.5.2. Utilities

In estimating costs of utility expenses for operation and maintenance of the project, Costs of fuel, oil and

lubricant, electricity and water consumptions have been taken in to consideration, the rates of which have

been estimated on the basis of the proposed capacity utilization program of the project and at the current

official charging rates. At full capacity operation the project will have the following utility expense per annum

which amounts to Birr 6.089 million.

#### 5.5.4. Financial costs

As it has been outlined earlier under" project Financing" the current Development Bank of Ethiopia credit terms and conditions for newly establishing projects have been used to compute the financial costs, estimated to be incurred in connection with that of the total investment costs assumed to be covered through loan financing. The amount of the loan capital to be obtained and the financial costs to be incurred thereof have been determined depending on the amount of fixed investment cost and pre-production expenses.

# 5.5.5. Depreciation

## 5.6. Break Even point and ROI

## 5.6.1. Break Even point (BEP)

Three kinds of break-even point

- A. BEP Sales Revenue(BR)
- B. BEP production (Volume)
- C. BEP Percentage (%)

## A. Break-even point(BEP) Sales

To determine BEP Annual Sales, multiply annual sales found in income statement by the annual fixed cost, and divided by Annual sales less Annual variable cost.

$$BEP (sales) = \frac{Annual sales \times Annual fixed costs}{Annual sales-Annual variables costs}$$

Annual sales = 439,042,000 Birr

Unit selling price = 76 Birr/kg

$$BEP (sales) = \frac{Annual \, sales \, x \, Annual \, fixed \, costs}{Annual \, sales - Annual \, variables \, costs} = \frac{439,042,000 \, x \, 63,458,000}{439,042,000 - 144,663,000}$$

BEP (Sales) = 
$$94,642,237$$
 Birr

#### B. BEP production

To determine BEP production volume, divided BEP sales by the unit selling price (USP)

BEP production = 
$$94,642,237/76 = 1,245,293$$

C. BEP percentage = 
$$\frac{\text{Annual fixed costs x 100\%}}{\text{Annual sales-Annual variables costs}}$$
$$= \frac{63,458,000 \times 100\%}{439,042,000-144,663,000}$$
$$= 21.60\%$$

#### 5.6.2. Return on investment

Return on investment = Net profit /Total capital requirement

= 60,395,000/345,597,000

= 17.5%

#### The return on owners' investment (ROOI)

= Annual net profit /owners' investment

= 60,395,000/103,679,100

=58.25%

## 5.7. Project benefits

For financial analysis and evaluation of the given project, the current raw tomato price, and packing materials buying price and final packed processed tomato price at the project gate has been taken as a basis. Consequently, based on the recent market survey, at the nearby market pints is estimated at Birr 8 birr per kg and delivery price of processed tomato price has been indicated in table 19.

As it has been stated earlier the project is envisaged to reach full capacity operation four years after commencement of production activities which are assumed to begin with 70% of the estimated total capacity.

Thus, according to the computation in Annex Table 20 and Annex Table 22, the net income and cash flow statements analysis revealed that at full capacity operation the project will generate a total income (gross revenue) amounting to 439.04 million Birr per annum. The Net Income Statement shows a steady growth of gross profit starting from 92.92 million Birr in year 1 reaching the peak of 213.24 million Birr in year 10. In its 10 years of manufacturing activities, the project is expected to

CONSULTANT:- SHIBAG MANAGEMENT AND DEVELOPMENT & EIA CONSULTING FIRM

38

generate a total net profit of 1.099 billion Birr and contribute 591.86 million Birr to the government

treasury in form of 35% income tax.

According to the current investment Law, machinery and equipment are anticipated to be imported

duty- free. The liquidity position of the project is very strong. The corresponding Annex Table 22

of "Cash Flow Statement" shows the positive cumulative cash balance of Birr 1.08 billion and the

project will not face any cash shortage throughout its production life.

The computation of the pay-back period as depicted in Annex table 27 indicates that the project will

be able to reimburse itself from its net cash-income within four years after commencement of

production activities, the period which is considered to be very good for the project of this nature.

In Annex Table 28 of the Benefit-cost ratio and Net present value (NPV) have been calculated at

17% discount factor (D.F) for 10 years of the project activity. Accordingly, the project has NPV of

628.96 million Birr at 17% D.F. and the benefit-cost ratio of 1.52 at 17% D.F. These results are most

appreciable, especially, when related to the external capital borrowing interest rate which ranges

from 8.50% to 18.5 % for newly establishing projects.

Break-even point (BEP) have been undertaken the project under study when implemented will have

BEP at about 21.60% operation of the estimated full capacity

In addition to this, finally, summary of financial efficiency tests have been conducted in Annex table

26, Accordingly, all efficiency ratios indicated positive trends and consequently, it can be inferred

that the project can operate in the frame work of free market mechanism on commercially and

financially viable basis and is remunerative.

## ANNEX IV CALCULATION OF WORKING CAPITAL REQUIREMENTS

. Minimum requirement of current assets and liabilities

A. Accounts receivable: 26 days at total production costs minus depreciation and interest

B. Inventory

Material inputs: 26 days
 Spare parts : 90 days

3. Work under process: two days at direct costs

4. Product ready for delivery: 8 days at direct costs plus administration overheads

C. Cash on hand : 360 days

D. Accounts payable 26 days for material inputs and utilities

ii. Working capital requirement

Table 18 Calculation of working capital
